SUMMARY

Full-stack engineer building AI-native platforms and developer tooling at Chubb — enterprise data products, LLM-integrated CLIs, and MCP workflow plugins. Focused on measurable delivery, clean architecture, and engineering-team enablement.

EDUCATION

B.Tech, Information Technology

Kalinga Institute of Industrial Technology, Bhubaneswar, Odisha

Graduated July 2024

CGPA 9.10

Student Coordinator for **National Service Scheme**, coordinating multiple drives for over **600** students

TECHNICAL SKILLS

Languages: TypeScript, Java, JavaScript, Python, C++

Back-end: Node.js, Spring Boot, MongoDB, Socket.io

Cloud: Azure, Kubernetes, Docker, Jenkins

Front-end: React, Angular, Next, MaterialUI, PrimeNG

Tools: JIRA, Git, GitHub, JUnit, Jest

AI/ML Tools: Claude Code, TensorFlow

PROFESSIONAL EXPERIENCE

Chubb Engineering, Hyderabad, India

Sept 2023 – Present

Senior Software Engineer | June 2026 – Present

- Leading delivery of an enterprise **financial forecasting platform** (Angular 20 + Nx + NestJS + Snowflake) with AI-powered anomaly detection and LLM-generated narratives — reducing variance analysis from **8 hrs to <5 min**; 4-layer Redis caching achieving **<300ms p95** response.
- Architected **row-level RBAC** (Azure AD OIDC + TVP-parameterized SQL, 18 stored procs) — zero injection surface, entitlements resolved in <60ms.
- Built a **semantic codebase intelligence CLI** (TypeScript + MCP) that extracts typed knowledge graphs from repositories and surfaces them to AI coding assistants, cutting context-setup overhead across large codebases.
- Engineered an internal **developer tooling suite** (Python + TypeScript): AI code attribution tracker, FMEA-based observability gap detector (10+ languages), and Atlassian workflow plugin with parallel-execution MCP skills.

Software Engineer | Sept 2023 – May 2026

- Accelerated **product onboarding by 75%** through scalable full-stack solutions (Angular, Java, Quarkus, Kubernetes); built and maintained a **reusable UI component library** aligned to Chubb's internal design system.
- Boosted test coverage from **0% to 85+%** (Jest, Playwright, JUnit); cut load times **30%** via NgRx store + caching; contributed to micro-frontend architecture and backend API development.
- Led and mentored **10+ developers/interns**; drove code reviews and cross-functional delivery; organized large-scale internal tech events and delivered award-winning solutions.

KCPL, Kolkata, India: Software Engineering Intern

May 2022 – Jan 2023

- Delivered end-to-end solutions** by building web solutions on React.js, optimizing **SEO**, and architecting **scalable, cloud-based systems** for reliable data storage and maintainability.
- Automated business workflows** (sales, warehousing, purchase, and stock) using **Python** and **Excel VBA**, streamlining operations and **eliminating single points of failure**.

PROJECTS

Vatana

- Designed & developed** an end-to-end **grocery shopping platform** with secure **JWT authentication**, core **e-commerce features** (cart, wishlist, payments via Razorpay), and a modern **Angular+Bootstrap UI**.
- Built a **comprehensive admin dashboard** for **real-time order tracking, inventory management, and earnings insights**, ensuring scalability and a seamless user experience.

RecruitMate

- Automated interview scheduling** for large-scale hiring drives with features like **role management, advanced filtering**, error handling, and reporting, reducing manual effort by **98%**.
- Successfully **scheduled 750+ interviews**, enabling scalability, reliability, and freeing HR teams to focus on strategic tasks.
